

# Project Presentation

# Who am I?

- My name is cheyenne.
- I approached the project with a structured approach.
- Jira > Backend > Frontend > Documentation

# Sprint plan?

- I listed down everything I that the specification asked for and broke it down into 4 epics:
- Backend
- Frontend
- Documentation
- Testing

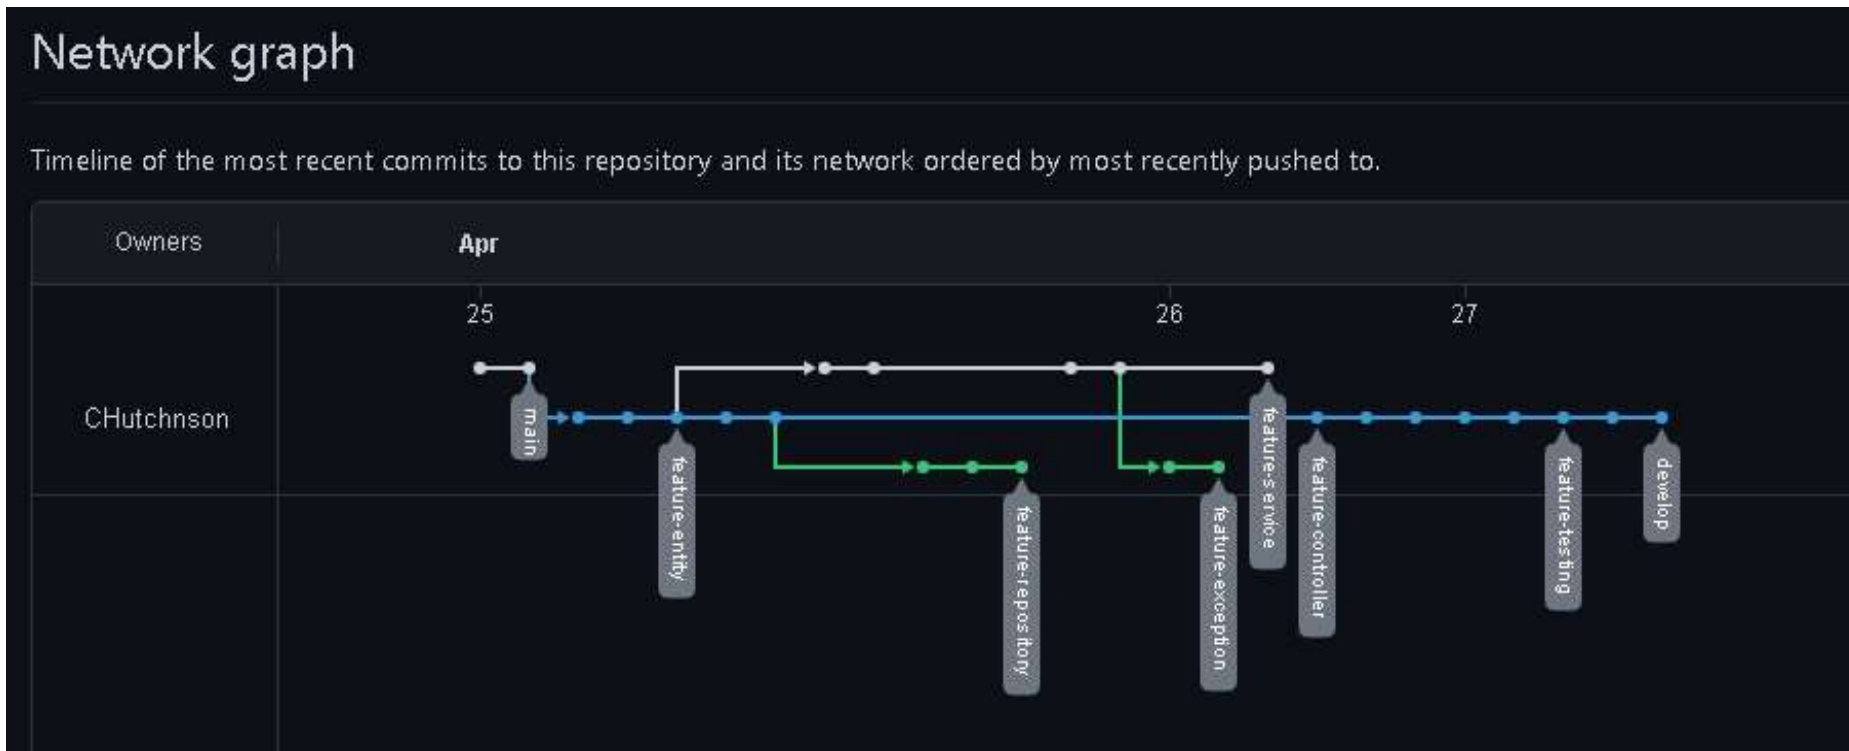

# Consultant Journey

- I learned a lot about how to connect the frontend to the backend.
- Also learned a lot about testing specifically the difference between unit and integration tests.
- Technologies learned: Spring, Javascript, HTML, CSS, JUNIT, Mockito

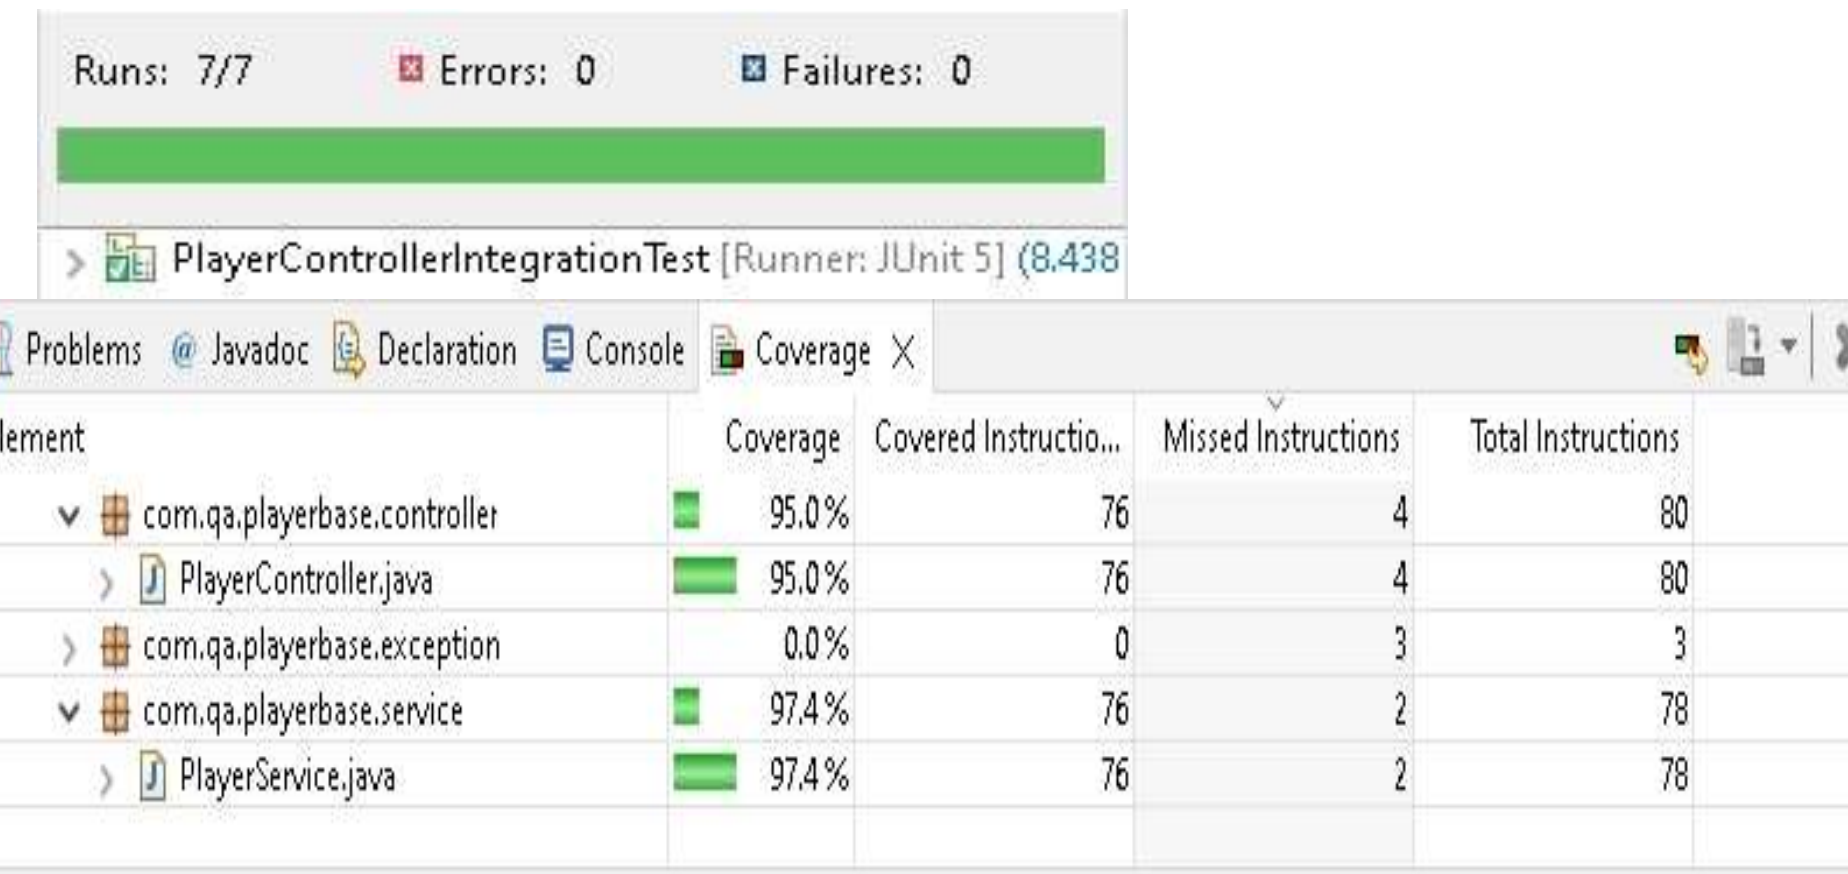

# CI

- I made various branches on Github for each feature I had and continuously integrated these features.

# Testing

- Process: I completed all of the testing and achieved cover 90 – 100% coverage of my controller and service.

# Conclusion

- Although this helped me a lot it definitely showed me that I need to get stronger with java script and HTML as there is still a lot for me to learn.
